To Whom It May Concern:

My daily observations of the deteriorated condition of most of our highways and freeways across the United States, leads me to conclude that if some drastic actions to correct these conditions are not taken sooner...there will be no later! I see highways that are desperately in need of repair! Note to persons or committees in charge of deciding who will get these highway contracts... look further than California. The job on Hwy I-5 in Burbank / Van Nuys is taking WAY TO LONG! Please take note of the Hwy I-15 job in Utah, they made a four lane asphalt freeway into a twelve lane concrete freeway in four years, that was a forty mile job, they had forty-six overcrossing jobs going on at one time. Please look into the way contracts were given out, and who they were given to, in other states. ! Also, I believe we need to get all gas engine cars off the roads only electric cars and trucks hauling freight should be allowed. Truck engine technology should be at the forefront of this new pollution conscious more ideal way of doing business. We need to bite the bullet and be willing to make some hard choices and sacrifices. Our very lives and the life of this planet depend on it. There should be mandatory mass transit systems put in place, such as trains, buses, and subways. They all must be clean and safe for the environment.

Thank You,

DK
